

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

Page 1 of 1

PATENT NO. : 7,272,135
APPLICATION NO.: 09/431,902
ISSUE DATE : September 18, 2007
INVENTOR(S) : K. Ohtsu

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

Claim 1 column 14, line 28: "for coin pressing" should be indicated as -- --for compressing-- --.

MAILING ADDRESS OF SENDER (Please do not use customer number below):

Katten Muchin Rosenman, LLP.
575 Madison Avenue
New York, NY 10022-2585

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

REQUEST FOR A CERTIFICATE OF CORRECTION

SIR:

We request a Certificate of Correction under 35 U.S.C. §254, to correct Claim 1, column 14, line 28, which was incorrectly listed as “... for coin pressing ...” Please change the same to read: “... for compressing ...”

Attached, please find a copy of the page with claim 1, column 14, line 28.

This was due to an error made by the USPTO.

Any fee due as a result of this paper, may be charged to Deposit account No. 50-1290.

Respectfully submitted,

/Nathan Weber/

Nathan Weber
Reg. No. 50,958

Customer No.: 026304
KATTEN MUCHIN ROSENMAN, LLP
575 Madison Avenue, 15th Floor
New York, NY 10022-2585
(Tel) 212-940-8800
Docket No.: FUJY 16.705(100794-11345)

Thereafter, in step S21, the GW 10 transmits a message including the effect that "8-Kbps linear compression" is selected as a CODEC form in an upward direction on the IP network 3 to the GW 20.

Upon completion of the capability exchange procedure based on H. 245, in the GW 10, as in Operation 1, the B-channel compression/expansion section 15 is set in a mode in which upward sound data is not expanded. The VoIP compression/expansion section 21 is set in a mode in which upward sound data is not compressed.

In contrast to this, in the GW 20, the VoIP compression/expansion section 21 is set in a mode in which the upward sound data (payload compressed by "8-Kbps linear compression") is expanded. The B-channel compression/expansion section 15 is set in a mode in which the sound data expanded by the VoIP compression/expansion section 21 is compressed by a "16-Kbps linear compression" form.

Therefore, in the GW 10, as in Operation 1, the upward sound data is transmitted to the IP network 3 without being subjected to an expansion/compression process. However, in the GW 20, sound data compressed by "8-Kbps linear compression" is expanded and compressed by "16-Kbps linear compression", and then transmitted to the circuit switched network 2.

Also, in this case, since an expansion/compression process in the GW 10 can be omitted, transmission time of sound data can be shortened, a process load on the GW 10 can be reduced.

<Operation 3>

In Operation 2, the following case has been described. That is, as a result of the H. 225 signaling procedure, the CODEC form of the sound data transmitted from the circuit switched network 1 to the GW 10 is "8-Kbps linear compression". The CODEC form of the sound data transmitted from the GW 20 to the circuit switched network 2 is "16-Kbps linear compression".

In contrast to this, the following case may occur. That is, although the CODEC form of the sound data transmitted from the circuit switched network 1 to the GW 10 is "16-Kbps linear compression", the CODEC form of the sound data transmitted from the GW 20 to the circuit switched network 2 is "8-Kbps linear compression".

In this case, an H. 245 capability exchange procedure shown in FIG. 4 is the same as that in Operation 2. More specifically, in step S13, the GW 20 compares the two CODEC forms described above to select a CODEC form having a low transmission rate (transmission band). The GW 20 transmits a message including "8-Kbps linear compression" to the GW 10 as a CODEC form that can be executed by the GW 20.

Thereafter, in step S21, the GW 20 transmits a message including the effect that "8-Kbps linear compression" is selected as a CODEC form in a downward direction on the IP network 3 to the GW 10.

Thereafter, in step S21, the GW 10 transmits a message including the effect that "8-Kbps linear compression" is selected as a CODEC form in an upward direction on the IP network 3 to the GW 20.

In this manner, upon completion of the H. 245 capability exchange procedure, in the GW 10, the B-channel compression/expansion section 15 is set in a mode in which upward sound data (in-band information compressed by 16-Kbps linear compression) is expanded. The VoIP compression/expansion section 21 is set in a mode in which sound data expanded by the B-channel compression/expansion section 15 is compressed by the "8-Kbps linear compression" form.

In contrast to this, in the GW 20, as in Operation 1, the B-channel compression/expansion section 15 is set in a mode in which upward sound data is not expanded. The VoIP compression/expansion section 21 is set in a mode in which upward sound data is not compressed.

Therefore, in the GW 10, the upward sound data compressed by "16-Kbps linear compression" is expanded and compressed by "8-Kbps linear compression" to be transmitted to the IP network 3. However, in the GW 20, as in Operation 1, the upward sound data is transmitted to the circuit switched network 2 without being subjected to an expansion/compression process.

Also, in this case, since an expansion/compression process in the GW 20 can be omitted, transmission time of sound data can be shortened, and a process load on the GW 20 can be reduced.

The processes in Operations 1 to 3 described above may be performed in only a case wherein sound data received from the circuit switched network 1 or 2 of each of the GWs 10 and 20 is compressed.

What is claimed is:

1. A gateway apparatus, arranged between an internet protocol network and a circuit switched network, for transmitting data received from the internet protocol network to the circuit switched network, comprising:

an expansion section for expanding compressed data received from the internet protocol network;

a compression section for compressing the data expanded by the expansion section;

a setting section setting a compression form for compressing the data being transmitted to the circuit switched network, wherein the compression form includes a transmission rate;

a judging section judging whether the compression form set by said setting section coincides with the compression form of the compressed data received from the internet protocol network or not; and

a controller performing control such that when the compression forms judged by the judging section do not coincide, the compressed data received from the internet protocol network is expanded by said expansion section, the expanded data expanded by said expansion section is compressed by said compression section at the compression form set by said setting section, and the compressed data compressed by said compression section is transmitted to the circuit switched network; and

when the compressed forms are judged to coincide, the compressed data received from the internet protocol network is transmitted to the circuit switched network without processing by said expansion section and said compression section.

2. A network system comprising a first gateway apparatus to which a first circuit switched network is connected, a second gateway apparatus to which a second circuit switched network is connected, and an internet protocol network to which the first gateway apparatus and the second gateway apparatus are connected, wherein

the first gateway apparatus comprising:

a notification section giving information of a CODEC form of compressed data, transmitted from the first circuit switched network to the first gateway apparatus, to the second gateway apparatus as CODEC information when compressed data is transmitted from the first circuit switched network to the second circuit switched network through the internet protocol network; and
